

## Signature 2023 Job Cost

built for  Microsoft Dynamics GP

### Keep Projects On Time, On Budget, and On Task

Signature Job Cost is engineered for field service and construction professionals to track and manage all phases of your jobs from planning to completion. You can schedule resources, enter cost activity, generate purchase orders, process vendor bills and invoice customers, maintaining visibility at every phase of a job. Our Job Cost solution assists you in achieving profitability targets by keeping every project on time, on budget, and on task.

Signature Job Cost is the leading job cost solution with streamlined workflows that are built for and embedded within Microsoft Dynamics GP to manage your field service and construction business more efficiently, as well as eliminate duplicate entries across isolated applications.

### Improve Job Workflows and Profitability

#### Manage process workflows with simplicity

- Track job or project costs for all components of a job or product - subcontractors, labor, materials, equipment, and other defined costs
- Manage change order processes to respond quickly to new requirements and adjust to new anticipated costs
- Manage the forecast review process to ensure accurate POC calculations and reporting
- Manage subcontractor document requirements.

#### Analyze financial performance of jobs and projects

- Compare key performance indicators; see estimated, committed and actual costs and drill down to additional period level details
- Manage the general ledger with up-to-date labor, equipment, materials status, and progress reports
- Quickly access and assess unposted costs at the job and project level
- Print required financial statements and drill down to supporting data
- Run reports to validate and maintain certifications and compliance

#### Save time with process efficiencies

- Manage SOP billing by associating cost codes to individual line items on a sales transaction
- Quickly filter jobs by job number, inactive jobs, and posting date to expedite job closing
- Get easy access to relevant information, with role-defined home pages based on user preferences
- Close jobs with confidence based on automated job status analysis

### Scale Your Business with Signature Job Cost

- Keep projects on-time, on-budget and on-task
- Manage a job's estimates to actuals and change orders, and ensure on-time invoicing
- Allocate employees, equipment, and tools to jobs
- Bill at a project or job level with convenient invoicing tools, including milestones and retention
- Easily manage subcontractors' contracts, scheduling, and billing
- Eliminate manual entry and completion of AIA billing forms with our automated feature
- Leverage POC (percentage of completion) reporting
- Automatically calculate and apply prevailing wage
- Track everything needed to ensure accurate payroll, unions, and compliance reporting

## Expand Job Cost with Advanced Functionality

### Advanced Document Management

Capture, store, retrieve, and attach files to fields including: the service call, location, customer record, maintenance contract, or equipment records.

### Project Level Roll-up

Combine multiple jobs into one project, allowing users to view jobs from the project level as well as to bill multiple jobs on a single project invoice. Users can drill down to job-level detail, cost codes, and transaction-level details, and also view contract details.

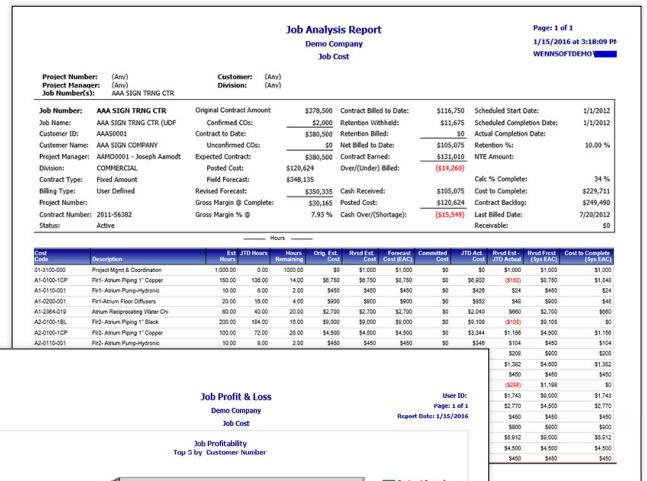

### Advanced Subcontractor

Manage vendors and subcontractors, with the ability to automatically track information such as insurance and workers' compensation expiration dates, draw requests, retention percentages, and certificate expirations.

Enable users to manage information more efficiently:

- Change-order tracking for inclusion on AIA billings
- Drawings, submittals, documents and other paperwork associated with contracts.
- Payment control (pay-when-paid)

## Track Financial Performance at the Touch of a Button

*"I like the accessibility of the Job Cost... it's the most valuable to me because I can drill back and see not only the customer, where the job was, who the owner was, what the PO was, was it certified payroll, was all of the little bits and pieces that I would have to go and look for all over the folders, I can find in one central place."*

- Seiberlich Trane

## Signature Job Cost is Integrated with the Signature Product Family to Streamline your Business

### Signature Service Management

Manage job warranty and repair services using Service Management. Pass the warranty costs to the job or bill the job at marked up pricing.

### Signature Schedule

Dispatchers and resource coordinators can quickly view, set up and organize appointments and work assignments. Expand functionality to quickly see real-time vehicle locations with Signature Telematics.

### MobileTech

Put full job appointment completion functionality and back-office access in your technicians' hands, no matter how remote the location, with MobileTech's "store-and-forward" technology. Ensure technician safety with our automated Job Safety Analysis.

### MobileTech Inspections

Streamline the inspection process by automating old paper-based inspections with intelligent digital forms. Inspection reports can be designed and associated to Signature service calls, customer, location (Job & Service), equipment and additional work entities.

### Signature API

Easily build web apps with the Signature API to get specific Signature and Dynamics GP data using standard JSON. The developer needs no knowledge of tables structures to access data.

### Signature Telematics

Harness the power of GPS, AI safety cameras, vehicle diagnostics, and driver rewards with fleet tracking that is integrated into Signature Schedule to show vehicle locations in near real-time.

### Signature Time

Save time with a cloud-based time entry solution that is integrated with Signature TimeTrack. Ensure accurate weekly time entry with dynamic lookups to Signature data for office and field workers to quickly select job activity, cost codes and pay codes.

### Signature TimeTrack

Provide a single point of entry where employees can post labor and expenses to jobs. Information entered once can be used by multiple modules, allowing supervisors and project managers to easily monitor and analyze ongoing labor costs.
